Washington University, St Louis

Alternative Funding for Core Instrumentation

With the uncertain future of federal grants, see how some core directors are finding alternative ways to acquire instrumentation for their facility.

Speaker Bio

Since joining Washington University in 2002, I have had the honor of working with many phenomenal researchers. These experiences have allowed me to develop understanding and expertise in applying genomic tools to the needs and goals of the research. My experience includes more than a decade in high-throughput PCR and next generation sequencing and more than two decades in microarray. I have more than 10 years of clinical laboratory experience as well, acting as a supervisor for our facility in a CAP/CLIA certified setting. Prior to my tenure at Washington University, I worked in a microarray services laboratory at Incyte Genomics.

2nd annual SC3 Conference, Sept. 30 – Oct. 2, 2025 Pegasus Park in Dallas, TX
